PROFESSIONAL SUMMARY

Infrastructure and platform engineer with 7+ years of experience building, owning and operating shared production platforms for a regulated government private cloud (National Informatics Centre), banking client ICICI Bank, and AWS. Treats the platform as an internal product: plans multi-release roadmaps (e.g. the Kubernetes v1.27 → v1.29 upgrade program), maintains a prioritised backlog of platform improvements, and turns manual work into reusable, automated building blocks (Terraform modules, Ansible roles, CI/CD templates) that application teams consume consistently. Experienced in exposing and operating services through APIs and gateways (AWS API Gateway, Lambda, Kubernetes ingress), managing backlogs in Jira, coordinating vendors on contract deliverables and SLAs, working with cross-functional teams (developers, architecture, network, storage, security), and delivering under ITIL change control with measurable outcomes. Hands-on with AI-enabled engineering, from GPU platforms for LLM inference (vLLM, Triton, MLflow, Kubeflow) to an LLM-based log analytics tool, applied with access controls and governance. Seeking to bring this platform-as-a-product discipline to a banking integration platform.

CORE SKILLS

Platform Ownership	Platform roadmap and release planning, backlog prioritisation (Jira), vendor and contract deliverable management, reusable/self-service platform components, adoption and reliability measures, stakeholder alignment, vendor/OEM coordination, ITIL change, incident & problem management, Agile/DevOps
Integration & APIs	API integration for banking applications (ICICI Bank), AWS API Gateway, Lambda, REST-based service exposure, Kubernetes ingress controllers and load balancing, service networking (DNS, TCP/IP, firewalls), containerised microservice deployment
Containers & Orchestration	Kubernetes (cluster administration, version upgrades, etcd backup/restore, RBAC, namespaces, resource quotas, GPU scheduling), Docker, Red Hat OpenShift, AWS EKS & ECS, Helm
CI/CD & IaC	Jenkins, GitLab CI/CD (build, test, release pipelines); Terraform; Ansible playbooks and roles for provisioning, configuration and rolling upgrades
AI-Enabled Engineering	LLM-assisted operations tooling (OpenAI API), vLLM, NVIDIA Triton Inference Server, MLflow, Kubeflow; AMD Instinct MI210 and NVIDIA GPUs on Kubernetes; access control and auditability for AI workloads
Cloud & Virtualization	AWS (EC2, EKS, ECS, Lambda, S3, API Gateway), Apache CloudStack, Proxmox VE, VMware ESXi, KVM/libvirt
Security & Governance	Kubernetes RBAC, SELinux, firewall policy, SSH hardening, LUKS, secure configuration baselines; compliance work with security teams in regulated government and banking environments
Observability	Prometheus, Grafana, Node Exporter, DCGM, Zabbix, Nagios; alerting, SLA tracking and log analysis
Linux, Storage & Scripting	RHEL, CentOS, Ubuntu; LVM, RAID, NFS, iSCSI, multipath; Dell PowerFlex, NetApp, SAN; Python, Bash

PROFESSIONAL EXPERIENCE

Platform Engineering Cloud Engineer (DevOps, Infra & Storage) — **Jul 2025 – Present**
Yotta Data Services Pvt Ltd – Client: National Informatics Centre (NIC) Private Cloud — *Pune, India*

Platform Ownership, Roadmap & Delivery

- Own the operational roadmap for production Kubernetes platforms serving AI/ML workloads: planned and delivered the v1.27 → v1.28 → v1.29 upgrade program one minor version at a time, sequencing control plane, worker nodes and add-ons against agreed change windows.
- Maintain a prioritised backlog of platform work (upgrades, deprecated API remediation, add-on compatibility, automation, monitoring gaps) and agree priorities with application, architecture, network, storage and security stakeholders.
- Coordinate OEM vendor engineers (Dell) for on-premises hardware delivery at the customer datacenter: installation, firmware, BIOS configuration and readiness testing before handover.
- Run all platform changes under ITIL change control with documented runbooks, rollback plans (etcd restore, package downgrade) and post-change validation, delivering upgrades without service interruption.

Reusable Platform Capabilities & Automation

- Converted manual upgrade and patching steps into reusable Ansible playbooks and roles so node upgrades run identically every time and complete within the change window.
- Provide a standardised, governed platform for application teams: RBAC, namespaces, resource quotas, persistent storage and GPU scheduling, reducing one-off environment requests.
- Run pre-upgrade readiness checks (cluster health, etcd snapshots, certificate expiry, deprecated API scans in manifests and Helm charts) and upgrade CNI, CoreDNS, ingress controller, containerd and GPU device plugin in step with each release.

- Automate deployment and configuration with Terraform, Ansible, Python and Bash for consistent, repeatable environments from non-production rehearsal to production.

AI-Enabled Platforms, Reliability & Governance

- Validated AMD Instinct MI210 GPU compute and deployed containerised AI services (inference and ML tooling) onto Kubernetes ahead of production go-live, with RBAC and quota controls.
- Monitor platform, GPU and storage health with Prometheus, Grafana, DCGM and iDRAC; tune alerts and drive performance fixes.
- Lead root cause analysis of production incidents and drive fixes to closure with platform, network and security teams; manage enterprise storage (Dell PowerFlex, NetApp, SAN, NFS) for data-intensive workloads.

Cloud Engineer **Nov 2021 – Jul 2025**

Tech Inizio Services – Clients: National Informatics Centre (NIC), ICICI Bank *Pune, India*

ICICI Bank – Banking Platform & Integration Support

- Supported infrastructure and deployment for ICICI Bank applications in a regulated banking environment, working with bank application, architecture, security and network teams.
- Worked on API integration: deployed, configured and monitored API services and gateways connecting banking applications and channels to backend systems, including troubleshooting connectivity, performance and release issues.
- Managed platform work items, change requests and releases in Jira, maintaining and prioritising the backlog with bank stakeholders and tracking delivery against sprint and change-window plans.
- Coordinated third-party vendors and OEMs on delivery scope, timelines, SLAs and contract deliverables; tracked vendor commitments and escalated risks and dependencies to closure.

NIC – Cloud, Automation & CI/CD

- Built and maintained Jenkins and GitLab CI pipelines as shared delivery templates to automate build, test and deployment of applications and infrastructure changes.
- Provisioned and supported AWS services including API Gateway, Lambda, EC2, EKS, ECS and S3 to expose and run containerised and serverless services.
- Automated infrastructure provisioning and configuration with Terraform, Ansible and Python, keeping environments consistent from dev to production.
- Operated private cloud and virtualisation platforms (Apache CloudStack, Proxmox VE, VMware ESXi, KVM/libvirt) hosting production Linux workloads; supported Kubernetes node patching, replacement and version upgrades.
- Delivered server refresh, infrastructure migration and storage modernisation projects (Dell storage expansion, firmware upgrades) with vendors and minimal downtime.
- Implemented Prometheus and Grafana monitoring; led incident triage and RCA across compute, storage, virtualisation and network layers under ITIL with SLA compliance; supported backup and DR operations.

Linux Engineer **Jul 2019 – Oct 2021**

Tech Inizio Services – Clients: Wipro, Veritas *Pune, India*

- Provisioned and maintained RHEL, CentOS and Ubuntu servers: OS installation, patch management and kernel upgrades.
- Applied security hardening (SELinux, firewall rules, SSH hardening) and configured DNS, DHCP and core network services; monitored with Zabbix and Nagios.
- Managed Linux storage (LVM, RAID, NFS, iSCSI, multipath); automated administration with Bash and wrote SOPs and runbooks.

KEY PROJECTS

Kubernetes Platform Upgrade Program – NIC Private Cloud (2025 – 2026)

Defined and delivered a multi-release upgrade roadmap (v1.27 → v1.28 → v1.29) with a repeatable process: readiness checks, etcd backup, deprecated API scan, staged control-plane and rolling worker upgrades, validation and documented rollback, all within agreed change windows.

GPU-Enabled Kubernetes Platform for AI/ML – NIC Private Cloud (Nov 2025 – Jan 2026)

Brought up and validated AMD Instinct MI210 GPU clusters and integrated them with Kubernetes as a shared, governed capability for containerised AI workloads and GPU scheduling.

AI Log Analytics Tool, LLM-based (Apr 2026 – Aug 2026)

Built a Dockerised Python tool using the OpenAI API that analyses Linux system logs and suggests likely root causes, an applied example of AI-enabled engineering productivity that cut incident investigation time.

On-Premises Infrastructure Deployment – NIC Private Cloud (Aug 2025 – Dec 2025)

Managed delivery of Dell enterprise hardware with OEM engineers at the customer site; documented inventory and rack layouts for production handover.

EDUCATION

Bachelor of Engineering (Mechanical) – Institute of Knowledge College of Engineering, Pune 2014 – 2017

Diploma in Mechanical Engineering – Bhivrabai Sawant Polytechnic, Pune 2010 – 2013
